CTA Training – Module 3 - Part 3 - Key Concepts
Tree Pruning - continued

8. What is the first reason to prune a mature tree?
9. Be able to describe "crown thinning". Know when crown thinning would be appropriate
10. Is "crown reduction" tree topping?
11. Know the best way to make a pruning cut on a tree is a (know which one) and be able to draw any of the following types of cuts:
 - a. Flush cut?
 - b. Stub cut?
 - c. Cut at branch collar?

7

CTA Training – Module 3 - Part 3 - Key Concepts
Tree Pruning - continued

12. Be able to draw co-dominant leaders & how you should prune one of the leaders
13. Name at least 3 reasons why it is bad to top trees
14. Why is it bad to cut all of the foliage off of a tree during the growing season (besides the fact that it looks bad)?
15. Know the 5 step process for pruning young trees and be able to draw a young tree and label the 5 steps on the drawing

8

PART 1 – TREE SELECTION = RIGHT TREE RIGHT PLACE

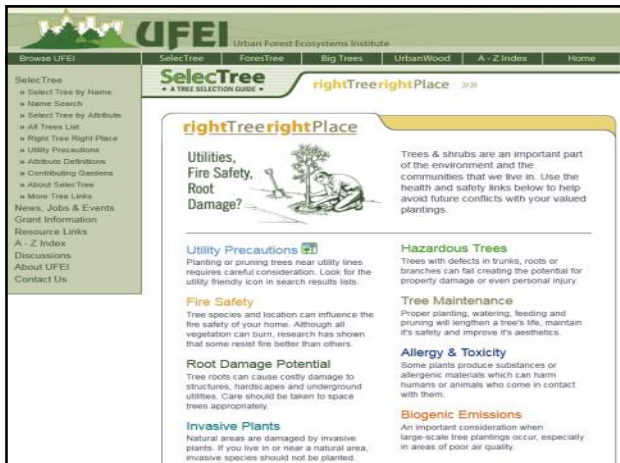

9

"Right Tree Right Place" – What Does this Mean?

- It means:
 - Selecting Small Stature, Medium Stature and Large Stature trees to plant in places suitable for their optimum growth
 - Selecting trees that are suitable for the climate zone in which your project is located
 - Not selecting large or medium stature trees to plant under power lines
 - Selecting trees to plant in tree wells or narrow parkways that will not damage adjacent infrastructure
 - Selecting trees that people want

10

UFEI Urban Forest Ecosystems Institute

SelectTree A TREE SELECTION GUIDE

rightTreeRightPlace

Utilities, Fire Safety, Root Damage?

Trees and shrubs are an important part of the environment and the communities that we live in. Use the health and safety links below to help avoid future conflicts with your valued plantings.

Utility Precautions
Planting or pruning trees near utility lines requires careful consideration. Look for the utility friendly icon in search results lists.

Fire Safety
Tree species and location can influence the fire safety of your home. Although all vegetation can burn, research has shown that some resist fire better than others.

Root Damage Potential
Tree roots can cause costly damage to structures, hardscapes and underground utilities. Care should be taken to space trees appropriately.

Invasive Plants
Natural areas are damaged by invasive plants. If you live in or near a natural area, invasive species should not be planted.

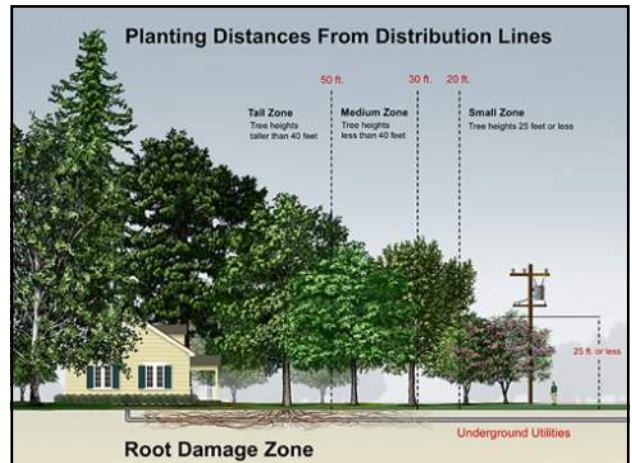

Hazardous Trees
Trees with defects in trunks, roots or branches can fall creating the potential for property damage or even personal injury.

Tree Maintenance
Proper planting, watering, feeding and pruning will lengthen a tree's life, maintain its safety and improve its aesthetics.

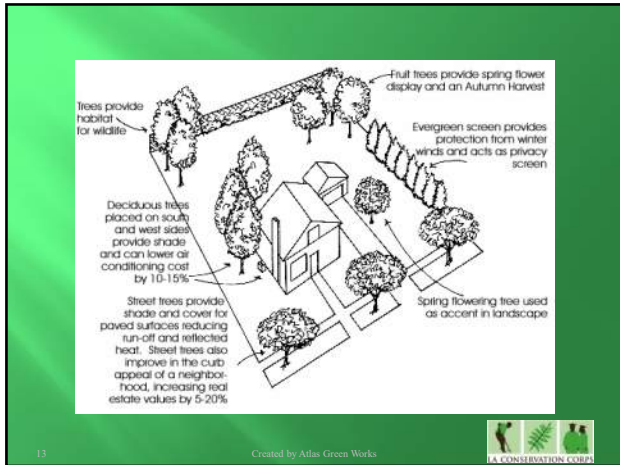

Allergy & Toxicity
Some plants produce substances or allergenic materials which can harm humans or animals who come in contact with them.

Biogenic Emissions
An important consideration when large-scale tree plantings occur, especially in areas of poor air quality.

11

12

13

Tree Selection Criteria List

- a. **Where are you planting trees?**
- b. **Species Diversity**
- c. **Pest and Disease Issues**
- d. **Availability at nurseries**
- e. **Invasive tree species**
- f. **Water Needs**
- g. **Growing Space**
- h. **Other Infrastructure**

14

Tree Selection Criteria List - Continued

- i. **Tree Function**
- j. **Beautification**
- k. **Deciduous vs. Evergreen**
- l. **Leaf Color & Texture**
- m. **Tree Form**
- n. **Leaf, Seed, & Fruit Drop**
- o. **Safety, Wind, Fire**

15

Tree Selection – Where Are You Planting?

- ▣ **Private property vs. public property**

16

Tree Selection – Public Property Design Process

- ▣ **Master Plan – Urban Design Considerations**
- ▣ **Streets, Transit, Pedestrian Paths**
- ▣ **Parks & Open Space**
- ▣ **Public institutional – e.g. schools**

17

Tree Selection – Growing Space

- ▣ **More growing space supports larger trees**

18

Tree Selection – Other Infrastructure

- ▣ **Presence of Other Infrastructure**
 - **Underground**
 - Pipes, vaults, cables
 - **Above-ground**
 - Overhead electric wires, phone & cable, street lights, traffic signals & signage
 - **At ground level**
 - Sidewalks, driveways, curbs & gutters, roadways, parking lots, etc.

19 Created by Atlas Green Works

19

Above-ground Conflicts

OVERHEAD HIGH VOLTAGE

STREET LIGHTING

20 Created by Atlas Green Works

20

Street Tree Selection Criteria

- ▣ **Pedestrian clearance**
 - **Headroom for pedestrians**
 - Requires selection of tree species that can be pruned up to **8 feet** or more of head clearance
 - Cannot select fruit bearing trees because of safety (fruit or cones and such falling on people) and nuisance issues (stains on sidewalks and tracking material into stores)

21 Created by Atlas Green Works

21

22

Street Tree Selection Criteria

- ▣ **Vehicular clearance**
 - **Height clearance for trucks**
 - Use trees that can tolerate lowest permanent branch at **14 feet** high
 - Plant trees further away from curb whenever possible
 - Use narrow form trees

23 Created by Atlas Green Works

23

24

Tree Selection – Safety, Wind, Fire

- ▣ **Safety**
 - **Playground & picnic areas**
 - Select trees that can provide shade in hot summer and that have strong branch attachments
- ▣ **Wind**
 - To protect from high winds can plant trees suitable as windbreaks
- ▣ **Fire**
 - Observe local standards that require trees to be planted further from wood structures in fire prone areas

Created by Atlas Green Works

25

Tree Selection – Climate Zone

- ▣ Select trees that are suitable for your local climate zone
- ▣ One of most common climate zone classifications is the “Sunset Western Garden” Climate Zones
- ▣ Can use UFEI SelecTree website

Created by Atlas Green Works

26

Tree Selection – Climate Zone

- ▣ **Factors**
 - Zones determined by 6 important factors:
 1. **Latitude** – length and severity of cold in winters; length of daylight in seasons
 2. **Elevation** – higher = longer & colder winters and lower night temperatures
 3. **Ocean Influence** – keeps temperatures cooler and humidity higher; precipitation more common in winter
 4. **Continental Air Influence** – colder in winter; hotter in summer; precipitation can happen any season
 5. **Mountains & Hills** – determine whether areas dominated by ocean or continental air influence
 6. **Local Terrain** – “aspect” (which way a slope faces) influences amount and timing of solar heat

Created by Atlas Green Works

27

Tree Selection – Climate Zones Bay Area

Created by Atlas Green Works

28

Tree Selection – Climate Zone 17

- ▣ **Marine effects in Southern Oregon, Northern and Central California**
 - Mild, wet, almost frostless winters and cool summers with frequent fog or wind.
 - On most days and in most places, the fog tends to come in high and fast, creating a cooling and humidifying blanket between the sun and the earth, reducing the intensity of the light and sunshine.
 - Some heat-loving plants (citrus, hibiscus, gardenia) don't get enough heat to fruit or flower reliably.
 - Average summer high is 60 to 75°F range.

Created by Atlas Green Works

29

Tree Selection – Invasive Species

- ▣ **Out compete native tree species & thereby cause harm to protected native habitat areas**
- ▣ **They can become a nuisance in disturbed & neglected areas**
- ▣ **Removal of these trees can be very difficult & expensive**

34

Tree Selection – Species Diversity

Species Distribution for all Documented Street Trees in Urban Honolulu				
Species	Count	% Tree Stock	Approved Street Tree*	
<i>Albizia leonensis</i> (SILOE) (SILOE TREE)	366	2.2%	Small	Y
<i>Tabebuia pentaphylla</i> (PINK TECOMA TREE)	323	6.3%	Medium	Y
<i>Coccothrinax coccinea</i> (COCONUT PALM)	274	5.3%	Large	Y
<i>Podocarpus neriifolius</i> (CUSTARD PALM)	249	4.8%	Small	Y
<i>Ficus religiosa</i> (FERN TREE)	183	3.6%	Small	N
<i>Crodia salicaria</i> (MAD MAD)	182	3.5%	Small	N
<i>Clusia rosea</i> (SILVER FRUIT)	172	3.2%	Small	Y
<i>Lagerströmia speciosa</i> (QUEENS CROUSE MYRTLE)	165	3.2%	Medium	Y
<i>Platanus spicata</i> (MONKEY TREE)	156	3.0%	Small	N
<i>Casuarina imrayana</i> (KAVIN LEAF)	139	2.7%	Small	N
<i>Dioscorea spicata</i> (ROYAL PONTIACA)	134	2.7%	Medium	N
<i>Coccothrinax coccinea</i> (COCONUT PALM)	129	2.6%	Small	Y
<i>Schinus molle</i> (CALIFORNIA PEPPER TREE)	126	2.5%	Medium	N
<i>Platanus spicata</i> (ROYAL PONTIACA)	118	2.3%	Medium	N
<i>Melaleuca quercina</i> (CAJUPUT TREE)	113	2.2%	Medium	Y
<i>Thaunus cordata</i> (AFROVITAE)	85	1.7%	Small	N
<i>Crodia salicaria</i> (MAD MAD)	85	1.7%	Medium	N
<i>Platanus spicata</i> (ROYAL PONTIACA)	85	1.7%	Small	N
<i>Platanus spicata</i> (ROYAL PONTIACA)	83	1.6%	Small	N
<i>Platanus spicata</i> (ROYAL PONTIACA)	83	1.6%	Small	N
<i>Clusia rosea</i> (SILVER FRUIT)	78	1.5%	Medium	Y
<i>Podocarpus neriifolius</i> (CUSTARD PALM)	78	1.5%	Medium	Y
<i>Clusia rosea</i> (SILVER FRUIT)	72	1.4%	Small	Y
<i>Clusia rosea</i> (SILVER FRUIT)	63	1.2%	Small	Y
<i>Platanus spicata</i> (ROYAL PONTIACA)	63	1.2%	Medium	Y
<i>Platanus spicata</i> (ROYAL PONTIACA)	57	1.1%	Small	N
<i>Clusia rosea</i> (SILVER FRUIT)	45	0.9%	Small	N
<i>Clusia rosea</i> (SILVER FRUIT)	45	0.9%	Medium	N
Total Species	2146			

* Tree size is based on criteria shown in Re-City and County of Honolulu Official Street Tree List - Small (up to 10' tall), Medium (10-30' tall), Large (over 30' tall)
 ** Indicates whether the tree species is on the City and County of Honolulu Official Street Tree List

35

Species Diversity – Why?

- ❑ **Tree population dominated too heavily by one or a few tree species makes urban forest susceptible to devastation pest or disease specific to a single or few species**
 - E.g., Chestnut Blight at beginning of 1900's in Eastern U.S.
 - E.g., Dutch Elm Disease in mid to late 1900's – wiped out American Elm Trees across U.S.
 - E.g., Emerald Ash Borer that is destroying Green Ash trees across U.S. now

36

Species Diversity – National Pest Problems – Dutch Elm Disease

37 Created by Atlas Green Works

37

Species Diversity – National Pest Problems

- ▣ Emerald Ash Borer is destroying Green Ash trees across U.S. now
- ▣ Has killed over 30 million ash trees
- ▣ Estimated impact in U.S. exceeds \$20 billion
- ▣ Over 7 billion ash trees at risk in eastern U.S.

38 Created by Atlas Green Works

38

Species Diversity – Local Pest Problems

Eucalyptus Species Pests:

- ▣ Redgum Lerp Psyllid
- ▣ Longhorned Borers
- ▣ Tortoise Beetle

39 Created by Atlas Green Works

39

Tree Selection – Pest & Disease Vulnerability

- ▣ Don't want to select tree species that have known serious pest and/or disease problems
- ▣ Having good species diversity can address potential future pest or disease problems that may arise in future

40 Created by Atlas Green Works

40

Tree Selection – Availability at Nurseries

- ▣ **Important if:**
 - Want to add species to a master plan or official street tree list
 - Specifying tree species for a very large project
 - Utility company recommending trees for long term residential shade tree program
 - Municipality is implementing a long term tree replacement program

41 Created by Atlas Green Works

41

Tree Selection – Water Needs

- ▣ **Water Requirements**
 - Major issue in Southern California
 - Use drought tolerant trees

42 Created by Atlas Green Works

42

Tree Selection – Function Desired

- ▣ **Shade**
- ▣ Erosion Control
- ▣ Fruit Production
- ▣ Habitat

43 Created by Atlas Green Works

43

Tree Selection – Deciduous or Evergreen

- ▣ **Deciduous**
 - Fall leaf color change
 - Shade in hot summer
 - Sun allowed through in cold winter climates
- ▣ **Evergreen**
 - Year round shade
 - No fall leaf color change

44 Created by Atlas Green Works

44

Tree Selection – Leaf, Seed, Fruit Litter

- ▣ All trees drop at least some leaves – even evergreen trees like pines
- ▣ Some fruit and flower drop can stain pavement
- ▣ Some people like a “carpet” of colored leaves in fall

45 Created by Atlas Green Works

45

Tree Selection - Beautification

- ▣ **Flower Display –**
 - Season
 - Color
 - Length of flowering period

46 Created by Atlas Green Works

46

Tree Selection – Tree Form

47 Created by Atlas Green Works

CTA Training – Module 3 - Part 3 - Key Concepts

Tree Pruning

1. What is meristematic tissue?
2. What plant parts can be contained inside a bud?
3. Do you prune right above a bud or right below a bud?
4. Be able to define “excurrent” tree form and “decurrent” tree form
5. When is generally the best time to prune deciduous and broadleaf evergreen trees?
6. Why is that the preferred time to prune these trees?

69 Created by Atlas Green Works

69

CTA Training – Module 3 - Part 3 - Key Concepts

Tree Pruning - continued

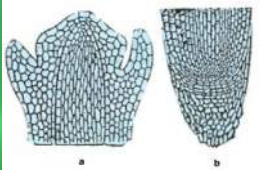

7. Name at least 3 reasons why it is bad to top trees
8. Is “crown reduction” tree topping?
9. The best way to make a pruning cut on a tree is a (know which one):
 - a. **Flush cut?**
 - b. **Stub cut?**
 - c. **Cut at branch collar?**
10. What is the first reason to prune a mature tree?
11. Why is it bad to cut all of the foliage off of a tree during the growing season (besides the fact that it looks bad)?
12. Know the 5 step process for pruning young trees

70 Created by Atlas Green Works

70

Tree Biology – Meristematic Tissue

□ **Undifferentiated plant tissue from which new cells are formed, as that at the tip of a stem or root.**

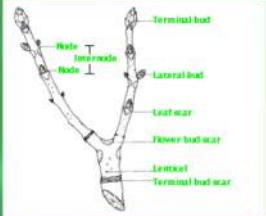

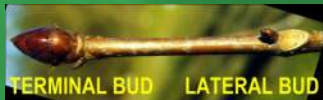

71 Created by Atlas Green Works

71

Tree Biology – Bud Types & Nodes

- **Terminal bud** – located at the tip of a shoot
- **Lateral bud** – located in the area above where a leaf is attached to the stem
- **Node** – the joint on a stem where a leaf is or was attached
- **Internode** – length of stem between nodes

72 Created by Atlas Green Works

78

When to Prune?

1. Both deciduous and broadleaf evergreen trees should be pruned in the winter months when they are dormant
 - a. Prune at the earliest after the last leaves have fallen from the tree
 - b. Prune at the latest before the buds have begun to swell and new leaves and flowers begin to develop in the spring

79 Created by Atlas Green Works

79

General Rules: How Much to Prune?

1. **No more than 25% of the canopy in any one year**
2. For many trees removing no more than 5% to 10% should be sufficient
3. For slow growing trees or trees growing in poor sites, you should remove <25% in any one year
4. In some cases where there are severe structural defects you may need to remove >25%

80 Created by Atlas Green Works

80

Reasons to Prune Trees

1. **Prune first for structure – GOOD STRUCTURE MAKES TREES SAFER**
2. **Prune next for health –make proper cuts – poor cuts leads to health problems for tree**
3. **Prune last for aesthetics**
4. **Never prune trees near utility lines – call a Certified Arborist**
5. **Avoid pruning trees when you might increase susceptibility to important pests**

105

106

107

108

Topping Creates Disease & Pests Problems

- ❑ Large stubs of a topped tree have a difficult time forming a callus.
- ❑ The terminal location of these cuts, as well as their large diameter, prevent the tree's chemically-based natural defense system from doing its job.
- ❑ The stubs are highly vulnerable to insect invasion and the spores of decay fungi.

109 Created by Atlas Green Works

109

Topping Creates Weak New Growth Attachments

- ❑ **New growth is weak – the sprouted branch attachment is weak as it is only growing from the bark tissues.**

110 Created by Atlas Green Works

110

Topping Causes Rapid New Growth

- ❑ Resulting sprouts are far more numerous than the normal new growth, and they elongate so rapidly that the tree returns to its original height in a very short time.

111 Created by Atlas Green Works

111

Topping "Starves" the Tree

- ❑ Topping removes so much of the crown that it upsets an older tree's well-developed crown to root ratio and temporarily cuts off its food making ability
